# Health Choice Utah Formulary

*Welcome to Our Family!*  
*Bienvenidos a Nuestra*  
*Familia!* Updated January 2018

## **What is the Health Choice Utah Formulary/Preferred Drug List (PDL)?**

A Formulary / Preferred Drug List (PDL) is a list of drugs chosen by Health Choice Utah and a team of doctors and pharmacists. Health Choice will cover the drugs listed in our PDL as long as they are medically necessary and appropriate. All Health Choice member prescriptions must be filled at a Health Choice network pharmacy, and other plan rules must be followed.

## **What if a drug is not on the Formulary/ PDL?**

If a drug you want to prescribe for your patient is not on this Formulary / PDL, the prescriber can:

- Prescribe a similar drug that is Formulary / PDL covered, or
- Ask Health Choice to make an exception and cover the medically necessary, non-formulary drug through the prior authorization process.

## **Can the Formulary / PDF change?**

Yes, Health Choice may add or take off drugs during the year. To get the latest information about covered drugs, go to our website at [www.HealthChoiceUtah.com](http://www.HealthChoiceUtah.com) or call Health Choice Member Services at 877-358-8797.

## **Product Selection Criteria**

The Health Choice Pharmacy & Therapeutics Committee will consider and advise Health Choice on all new-to-market drugs and will continually review and evaluate existing market drugs for formulary/PDL inclusion. The committee's evaluation includes a current literature review. Expert external opinion may also be sought. Formal reviews are prepared that typically address the following information:

- Safety
- Efficacy
- Comparison studies
- Approved indications
- Adverse effects
- Contraindications, warnings and precautions
- Pharmacokinetics
- Cost-effectiveness
- Patient administration and compliance considerations

When a new drug is considered for formulary inclusion, an attempt will be made to examine the drug relative to similar drugs currently on formulary. In addition, entire therapeutic classes are periodically reviewed. The class review process may result in deletion of one or more drugs in a particular therapeutic class in an effort to continually promote the most clinically useful and cost-effective agents. The entire formulary / PDL is reviewed and approved annually.

Prior authorization (PA) is required for two groups of medications and for two clinical formulary/ PDL override conditions:

### Medication Groups

- Medications noted with a PA in the formulary / PDL.
- All unlisted medications.

### Clinical Override Conditions

- To override a Step Therapy (ST) edit.
- To override a Quantity Limit (QL) edit.

Health Choice anticipates that requests for an unlisted medication will be infrequent and providers will be able to prescribe a formulary / PDL medication for the vast majority of therapeutic needs. Providers are encouraged to use this formulary / PDL when prescribing medications for Health Choice members to avoid unnecessary delays in therapy.

Off label drugs may be prior authorized when the use of the drug has proven to be the community standard.

Health Choice providers may formally request the Health Choice Pharmacy & Therapeutics Committee consider a medication be considered for addition to the formulary / PDL. The instructions and required submission form(s) which indicate how to submit a formulary / PDL medication consideration request are detailed in the Health Choice Provider Manual. The instructions and materials are also available on the Health Choice website.

All the information in the Health Choice formulary is provided as a reference for drug therapy selection. Specific drug selection for an individual patient rests solely with the prescriber.

## Formulary Product Descriptions

To assist in understanding which specific strengths and dosage forms are on the formulary, examples are noted below. The general principles shown in the examples can then usually be extended to other entries in the book. Any exceptions are noted in the drug list. There may also be a statement associated with a drug list that gives additional information about which specific products or dosage forms are on formulary.

Generic drugs are identified in lower case type, whereas brand drugs are identified in all caps

allopurinol is a generic drug  
ULORIC is a brand drug

The brand name products shown are for reference only; a different brand or a generic version may be dispensed.

simvastatin    ZOCOR

Extended-release and delayed-release products require their own entry. Identified below, both propranolol and propranolol SR are on the formulary.

propranolol    INDERAL  
propranolol SR    INDERAL LA

Dose forms on formulary will be consistent with the category and use where listed. Identified below from Otic group, the otic solution and ophthalmic ointment are on the formulary, and the ophthalmic products and topical cream cannot be assumed to be on formulary unless there are entries for these products in the OPHTHALMIC and DERMATOLOGY sections of the formulary.

neomycin/polymyxin B/hydrocortisone                        CORTISPORIN

## Generic Substitution

Utah Medicaid health plans are required to utilize a mandatory generic drug substitution policy. Generic substitution is a pharmacy action whereby a generic version is dispensed rather than a prescribed brand name product. An important consideration for generic substitution is the knowledge that all approvals of generic drugs by the FDA since 1984, and many generic approvals prior to 1984, have a showing of bioequivalence between the generic versions and the reference brand name product.

To gain FDA approval:

1. The generic drug must contain the same active ingredient(s), be the same strength and the same dosage form as the brand name product.
2. The FDA has given the generic an "A" rating compared to the brand name product indicating bioequivalence, and has determined the generic is therapeutically equivalent to the reference brand name product. The ratings of generic drugs are available by referring to the FDA reference, *Approved Drug Products with Therapeutic Equivalence Evaluations* (Orange Book).

When the above two criteria are met, a generic can be substituted with the full expectation that the substituted product will produce the same clinical effect and safety profile as the prescribed product. Drug products that have a narrow therapeutic index (NTI) can also be guided by these principles. It is not necessary for the healthcare practitioner to approach any one therapeutic class of drug products (e.g., NTI drugs) differently from any other class, when there has been a determination of therapeutic equivalence by the FDA for the drug products under consideration. Also, additional clinical tests or examinations by the practitioner are not needed when a therapeutically equivalent generic drug product is substituted for the brand name product.

It is recommended that generic substitution not be exercised by the pharmacist with multisource products that appear in the Orange Book and carry a "B" rating, indicating that these products cannot be considered therapeutically equivalent to other products in the group. It is also recommended that generic substitution not be undertaken for any unrated multisource products that might be considered narrow therapeutic index, or maintenance drugs where it is known that unrated products from different labelers are not bioequivalent. State law or regulations may dictate the ability to practice generic substitution for selected products or categories of drugs.

## Drug Efficacy Study Implementation Drugs

Drugs first marketed between 1938 and 1962 were approved as safe but required no showing of effectiveness for FDA approval. Beginning in 1962, all new drugs were required to be both safe and effective before they could be marketed. This legislation also applied retroactively to all drugs approved as safe from 1938-1962. The Drug Efficacy Study Implementation (DESI) program was established by the FDA to review the effectiveness of these pre-1962 drugs for their labeled indications, and a determination of fully effective was made for most of these products and they remain in the marketplace. A few DESI products remain classified as "less than fully effective" while awaiting final administrative disposition. Also, classified as DESI are many products listed as identical, similar, or related to actual DESI products.

Utah Medicaid and Health Choice will not pay for DESI "less than fully effective" drug products.

## Pharmacy Benefit Manager (PBM)

Health Choice Utah uses EnvisionRx to process our prescription drug claims
